

<b>Team ID</b>	PNT2022TMID45071
<b>Project Name</b>	Car Resale Value Prediction

## Pre-Requisites

*In order to develop this project, we need to install the following software/packages:*

### Step 1:

#### **Anaconda Navigator :**

Anaconda Navigator is a free and open-source distribution of the Python and R programming languages for data science and machine learning related applications. It can be installed on Windows, Linux, and macOS. Conda is an open-source, cross- platform, package management system. Anaconda comes with great tools like JupyterLab, Jupyter Notebook, QtConsole, Spyder, Glueviz, Orange, Rstudio, Visual StudioCode.

For this project, we will be using Jupyter notebook and Spyder

### Step 2:

To build Machine learning models you must require the following packages

#### **Sklearn:**

Scikit-learn is a library in Python that provides many unsupervised and supervised learning algorithms.

#### **NumPy:**

NumPy is a Python package that stands for 'Numerical Python'. It is the core library for scientific computing, which contains a powerful n-dimensional array object

#### **Pandas:**

pandas is a fast, powerful, flexible, and easy to use open-source data analysis and manipulation tool, built on top of the Python programming language.

**Matplotlib:**

It provides an object-oriented API for embedding plots into applications using general-purpose GUI toolkits

**Flask:** Web framework used for building Web applications.

If you are using anaconda navigator, follow the below steps to download the required packages:

1. Open anaconda prompt.
2. Type "**pip install numpy**" and click enter.
3. Type "**pip install pandas**" and click enter.
4. Type "**pip install matplotlib**" and click enter.
5. Type "**pip install scikit-learn**" and click enter.
6. Type "**pip install Flask**" and click enter.

If you are using Pycharm IDE, you can install the packages through the command prompt and follow the same syntax as above.
